Abstract (en)

[origin: WO2015143153A1] A system for providing monitoring of vehicle conditions is provided. The system may include a measurement device. The measurement device may be removably connected to a vehicle. The system may include a computer. The computer may be located within the vehicle. The measurement device may include a connection with the computer. The system may include a receiver. The receiver may be configured to receive, from the measurement device: measurement of data corresponding to an attribute of the vehicle, and a threshold measurement corresponding to a desired data measurement level for the vehicle attribute. The system may include a processor. The processor may be configured to determine if the threshold measurement is exceeded by the data measurement, and instruct a transmitter to transmit, to a user, an alert that the data measurement for the vehicle attribute has been exceeded.
