Abstract (en)

[origin: WO2015140310A1] An apparatus for packing goods piled on a pallet, by drawing a deformed hood of a reformable foil material on to the goods and allowing the deformed hood to reform into or towards its original shape and fixating the goods relative to the pallet and relative to one another. The apparatus comprises a rack defining sets of vertical legs and a top part, a supply of the reformable foil material in the form of a collapsed hose, and a film feed, film welding and film cutting assembly for receiving the collapsed hose. The apparatus further comprises a vertically movable film stretching frame which is vertically movable relative to the film feed, film welding and film cutting assembly from a top position juxtaposed the assembly to a lowered position, in which the film stretching frame draws the hood in its slightly deformed shape around the goods or packages and eventually allows the hood to reform to or towards its original shape. The film feed, film welding and film cutting assembly is journaled at one side of the rack for allowing the film feed, film welding and film cutting assembly to be shifted from a horizontal working position at the top of the rack to a vertical service or maintenance position outside the rack by swinging the film feed, film welding and film cutting assembly from the horizontal working position to the vertical service position.
