Abstract (en)  
[origin: US2017021955A1] The thermo-forming packaging machine according to one embodiment of the present invention comprises a sealing station, a first forming station for forming trays into a lower film web that is in a first forming plane clamped in the first forming station, and a second forming station for forming lids into an upper film web that is in a second forming plane clamped in the second forming station. The sealing station can be configured to create a sealing seam in a sealing plane. The thermo-forming packaging machine may be characterized in that the first forming plane is provided at least 200 mm below the second forming plane, wherein the first and the second forming planes are at least approximately parallel to each other.
