Abstract (en)  
Prefabricated element (12) containing a permanently embedded sign or its part (14), characterized by the fact that at least one surface of the element (12) has a cut (20) in the shape of the sign or its part (14), whereas inside the cut (20) is permanently embedded photoluminescent mass (22) which is flush with the external surface of the element (12). Production method of the element, according to which, in the first place the element (12) with the cut (20) is prepared and later the cut (20) is cleaned and dried. Next, it is primed and painted with reflective paint suitable for the photoluminescent mass (22) and into the cut (20) the fresh photoluminescent mass (22) is placed and left until it hardens.
