Abstract (en)
[origin: WO2015144694A1] The invention relates to a driving device comprising a hand-held housing (1), a piston element (2), which is accommodated in a piston guide (5), for transmitting energy from a propellant charge to a fastening element to be driven in, the piston element (2) extending along a central axis (A), and an actuator (10, 11, 12) by means of which a start position of the piston element (2) can be variably modified for changing the energy transmitted from the propellant charge to the piston element (2), the actuator comprising a slotted guide (10) that has a plurality of stop positions (10a) which differ in the axial direction.
