Abstract (en)

[origin: WO2015144884A1] The invention relates to a device (1) for producing a three-dimensional object (2) by solidifying, layer by layer, structural material (13) at locations in the respective layer corresponding to the cross-section of the object (2) to be produced, comprising a flow device (31, 32, 34, 35) for generating a gas flow above an applied layer of the structural material (13) by means of a nozzle element (40) for introducing the gas into the device. The nozzle element (40) comprises a body (41) having a gas inlet side (44) and a gas outlet side (46), and a plurality of channels (42), which penetrate the body from the gas inlet side (44) to the gas outlet side (46), are provided with inlet openings (45) on the gas inlet side (44) and with gas outlet openings (47) on the gas outlet side (46), and which are separated by walls (43). The length of the channels (42) is selected such that a laminar flow on the gas outlet side (46) is formed therein.
