Abstract (en)
[origin: WO2015144749A1] The invention relates to a marking device (1) for marking information carriers (2), comprising a housing (3), a marking unit (4), a marking region (5) formed inside the housing (3), and a holding device (6) for holding at least one information carrier (2), wherein the holding device (6) is able to move between a loading and unloading position outside the marking region (5) and a marking position inside the marking region (5). Using the marking device (1) according to the invention, different information carriers can be easily and quickly marked thereby, by the fact that there is a feed magazine (7) for accommodating a plurality of information carriers (2) to be marked, a deposit magazine (8) for depositing a plurality of marked information carriers (2), a conveyor device (9) and a positioning device, wherein an information carrier (2) can be taken from the feed magazine (7) into a first lower level in the marking region (5) by means of the conveyor device (9), wherein the first level is arranged below the holding device (6), the information carrier (2) can be moved vertically between the first lower level in the marking region (5) and the marking position in a second upper level in the marking region (5) by the positioning device, and the information carrier (2) can be taken from the first lower level in the marking region (5) to the deposit magazine (8) by means of the conveyor device (9).
