Abstract (en)

[origin: WO2015144354A1] The invention relates to a method for producing a data page, and to a data page (11) for embedding in a preferably book-like security and/or value document, comprising at least two layers (12, 14) arranged one on top of the other, made of an organic polymer material, and at least one fiber layer (16) arranged in a partial region between the layers (12, 14) and outside the layers (12, 14) forming an overlap. The first layer (12) is provided as roll material and is pulled off a roll (21), an organic binder is at least partially applied to an upper side of the first layer (12), a fiber layer (16) is provided as roll material and is pulled off a roll (25), and the fiber layer (16) is applied to the first layer (12) along a lateral edge (17) of the first layer (12) forming an overlap (19). The second layer (14) is provided as roll material and is pulled off a roll (27), and the second layer (14) is applied to the fiber layer (16), wherein the second layer (14) covers the first layer (12), at least in partial areas.
