Abstract (en)

[origin: WO2015143487A1] In summary, described herein is a mooring mechanism for mooring a sea vessel to a structure. The mooring mechanism comprises a support capable of being mounted to a sea vessel, a first clamping component connected to the support through an adjustment mechanism, and a second clamping component connected to the support. Operation of the adjustment mechanism moves the first clamping component relative to the second clamping component to allow a structure to be clamped therebetween to moor a sea vessel to the structure
