Abstract (en)

[origin: WO2015145039A1] The invention relates to a method for collecting at least one product (3) from among a line of products (3) arriving in a lined-up fashion one behind the other on a conveyor (2). Said conveyor (2) has a path (X), for conveying the products, and a conveying direction (S). Said method uses at least one collector (1; 1') of at least one product (3). Said collector (1; 1') comprises at least one first receptacle (7) capable of accommodating at least one product (3). Said collector (1; 1') is movably mounted along the path (X) for conveying the products (3) in the conveying direction (S) and in the opposite direction. The method is characterised in that it comprises at least one first step for collecting said at least one product (3) in said at least one receptacle (7) by moving said at least one collector (1; 1') over the conveyor (2) on the conveying path (X) and in said conveying direction (S).
