Abstract (en)
[origin: WO2015144478A1] The invention relates to a sleeve insert (1) for a plastics component (2), consisting of a shaft portion (3) and a bendable flange portion (4). The invention is characterized in that the sleeve insert (1) has a material- and/or cross-section weakening (5) which facilitates bending of the flange portion (4). A significant tolerance reduction can be achieved thereby because bending of the flange portion (4) takes place only once the sleeve insert (1) is installed.
