Abstract (en)

[origin: WO2015144919A1] The invention relates to an optoelectronic viewfinder with modular shielding, comprising an optoelectronic device (8), a bearing (15) comprising a rotary portion supporting the optoelectronic device (8), drive means engaging with the bearing such as to rotate the rotary portion, control means (14) suitable for controlling the drive means, and modular shielding suitable for being supported by the rotary portion of the bearing (15). According to the invention, the optoelectronic viewfinder is characterised by including detection means (24) for detecting the shielding connected to the control means which are arranged such as to adapt the control of the drive means in accordance with the result of the detection.
