Abstract (en)
[origin: WO2015145018A1] The invention relates to a method of processing a message by means of a first interconnection device, said method being characterised in that it comprises the following steps: recording a first database of processing rules in the first interconnection device, recording an identifier of a second interconnection device in the first interconnection device, and processing a communication in accordance with local processing rules of the first local database of rules and with remote processing rules obtained from a second interconnection device which is identified by means of the identifier of the second interconnection device.
