Abstract (en)

[origin: EP3124065A1] There is provided a medical pump monitoring device configured to manage a plurality of medical pumps arranged bedside, including: a reading terminal configured to sequentially read pump identification information items provided to the medical pumps; and an arithmetic processing unit configured to create image data used to display pump information items associated with the pump identification information items as a layout that maintains reading order in which the reading terminal reads the pump identification information items.
