Abstract (en)  
The invention relates to a continuous band of reinforced plasticized paper for manufacturing bags for horticultural products or the like, comprising a first continuous band of plasticized paper on at least one side, a second continuous band sheet of plastic material having a reticular shape attached to one another by any known method. In the first continuous band of paper, the first four slots are arranged in the confluence areas of the transversal joints and the folding bends to prevent the deterioration of the first continuous band of paper when making the folds. The use of the second continuous band of plastic material increases paper strength and improves the behavior thereof being attached, for example by heat sealing.
