Abstract (en)
The present invention relates to a laundry treating machine (1) comprising: #c a cabinet (2) with a basement (24) defining a bottom wall (23) of the cabinet (2) in a horizontal plane (X,Y); #c a drum (3) rotatably accommodated within said cabinet (2); #c a heat pump system (30) comprising a compressor (33) and a compressor cooling fan (60) housed in said basement (24), the compressor (33) substantially extending in a vertical direction Z perpendicular to the horizontal plane (X,Y), from a basement lower part (33b), placed onto said bottom wall (23), to an upper part (33a), located in an upper part (24a) of the basement (24); #c wherein the compressor cooling fan (60) is positioned onto said bottom wall (23) in a tilted position so that the main air flow is blown by the compressor cooling fan (60) along a direction tilted upward, towards the upper part (33a) of the compressor (33).
