Abstract (en)
The present invention relates to a dryer (1) comprising: o a casing (10) including a basement (3) having an upper shell (14) and a lower shell (13), said upper (14) and lower shells (13) being apt to be connected together in order to form said basement (3); o a laundry chamber (6) suitable to receive laundry to be dried; o a process air circuit (4) for circulating process air into said laundry chamber (6); o a condensing device (60) for removing moisture from the process air coming from said laundry chamber (6) located within the process air circuit (4); o a water collecting housing (12) located inside said basement (3) for the collection of condensation water formed by said condensing device (60); o a water removing unit (18) associable to said water collecting housing (12) for the removal of water therein comprising a pump unit (22) located inside said casing (10); and o a water protecting cover (40) located above said pump unit (22) apt to protect at least a portion of said pump (22) unit from condensation water condensed outside the process air circuit (4).
