Abstract (en)
This invention refers to a moveable solar protection system that allows easily changing the area of shade provided by the system according to the movement of the sun. In order to do so, the system comprises travel means on a first and/or second end in order to perform a lateral travel. In particular, a solar protection system is described comprising at least a first moveable pergola (100) having a first vertical section (100) with a plurality of slats (111) that protects from the sun, a second section (120) with a plurality of slats (121) that protects from the sun coupled to the first section (110) at an angle of at least 90°, and travel means (113, 123) in the first (110) and/or second (120) section, allowing movement in a specific direction.
