Abstract (en)  
[origin: US2017030122A1] A hinge for recessed installation between a door frame and a door panel has first and second housings adapted for recessing in the door frame and an edge of the door panel, a pair of links having ends pivoted in the housings and pivoted together about a vertical axis extending in a vertical direction perpendicular to mutually perpendicular first and second horizontal directions, and two supports in the second housing in which the respective ends of the links are pivoted. Respective adjusting screws extend in the second horizontal direction and are braced between the supports and the second housing such that rotation of each adjusting screws shifts the respective support in the second housing in the second horizontal direction. Respective pairs of guide faces spaced apart in the direction flank each of the supports.
