Abstract (en)

The invention relates to a roller device including a pin (10), a roller (12) supported by said pin (10) and tappet (14) configured to support said pin (10) in supporting bores (14d, 14e) provided in lateral flanges (14b, 14c) of said tappet (14), wherein at least one end face of said pin (10) is configured to be plastically deformed using a caulking tool 16 in order to lock said pin (10) within the pertinent bore (14d, 14e). It is proposed that said at least one end face of the pin (10) is provided with a recess (10c, 10d) configured to facilitate said plastic deformation.
