Abstract (en)
A lamp holder includes a frame seat (1), a rotatable seat (2), a lens unit (3) and a watertight elastic unit (4). The frame seat (1) includes a barrel wall (11) surrounding a first axis (L1) and defining a rotating space (111). The rotatable seat (2) is disposed in the rotating space (111), and has an outer surrounding surface (211), a connecting end (216) cooperating with an installing end (13) of the barrel wall (11) to define a gap (217) therebetween, and two rotating studs (218) extending from the outer surrounding surface (211) to the barrel wall (11) such that the rotatable seat (2) is rotatable about a second axis (L2) relative to the frame seat (1). The lens unit (3) is in watertight connection with the rotatable seat (2). The watertight elastic unit (4) is made of an elastic material, and interconnects the installing end (13) and the connecting end (216) to completely block the gap (217).
