Abstract (en)

[origin: EP3124860A2] Water is introduced into a steam production apparatus and system to produce steam. Electrical power is supplied to the apparatus though spaced apart electrical terminals to heat water introduce into the apparatus to turn the water into steam. The steam can be used for various purposes including powering of steam turbines for generating electricity, driving machinery, and for providing heat for heating systems. The generated steam can be used for various other purposes.
