Abstract (en)

A hatch to establish a communication between two chambers for processing under sterile conditions, a first wall (23) of the first chamber (19) having a first opening (21) and a second wall (24) of the second chamber (20) having a second opening (22), which is arranged in front of the first opening (21) and has, compared to the latter, a larger cross section. The hatch (1) has a first frame (26), which is positionable between the two openings (21, 22) and has an outer profile that can be inserted into the second opening (22), a second frame (2), which is mounted on the first frame (26) so as to be positioned on the second opening (22), a first annular gasket (27) interposed between the two frames (2, 26), a door (3) movably mounted on the second frame (2), a second annular gasket (28) which can be interposed between the first frame (26) and the first wall (23), and a third annular gasket (29) which can be interposed between the second frame (2) and the second wall (24).
