Abstract (en)
   [origin: WO2015151070A2] The invention relates to a method for functionalising a surface of a solid substrate with at least one acrylic acid polymer
   layer, said method comprising the steps of: i) placing said surface in contact with a solution consisting of at least one acrylic acid homopolymer, a
   solvent and, optionally, metal salts; ii) removing the solvent from the solution in contact with said surface; and iii) binding the polymer to said surface
   by thermal treatment.
