Abstract (en)
[origin: WO2015150287A1] The invention relates to a submarine. Said submarine has at least one rudder mechanism equipped with a linear drive. The linear drive is movably coupled to at least one rudder by means of an articulated linkage. A linear-drive part capable of translatory motion can thereby be connected in the direction of motion to an articulated-linkage connecting-rod capable of translatory motion, by means of an elastomer coupling.
