Abstract (en)

[origin: WO2015150660A1] The invention concerns a container (10) for liquid comprising a bag (12) intended to contain a liquid (L), said bag having an inner face, an outer face, an opening (24) and a piping device (28) fastened on the inner face, said piping device comprising a first face, disposed opposite the inner face of the bag, a second face, and at least one first flow channel formed on the first face thereof. The invention is characterised by the fact that the piping device covers the opening of the bag and further comprises at least one second flow channel formed on the second face thereof, such that the bag is filled and/or drained by a flow of the liquid in the first and second flow channels.
