Abstract (en)
[origin: WO2015150175A1] The invention relates to an adjustable camshaft (1) having an inner shaft (2) and an outer shaft (3) arranged coaxially thereto, and having a camshaft adjuster (4), the stator (5) of which is connected to the outer shaft (3) and the rotor (6) of which is screwed to the inner shaft (2). The invention is characterized in that an integral first connection contour (7) is provided at the end of the inner shaft (2) and an integral second connection contour (8), which is complementary to the first connection contour, is provided on the rotor (6), these connection contours directly or indirectly making an interlocking connection between the inner shaft (2) and the rotor (6) possible.
