Abstract (en)

[origin: WO2015150902A1] A pre-mixed gas burner comprises a conveyor element, a burner head and a distributing element arranged between the burner head and conveyor element, in which, during an operation of the burner, through the conveyor element flows an air and fuel gas mixture, which, through the distributing element, arrives at the burner head to form on the burner head outer surface a flame, the distributing element having a plurality of different holes therethrough an enhanced air-gas mixture amount flows to the burner head regions without holes and flame, to provide an improved burner head cooling, the conveyor element being moreover thermally screened by the distributing element and the air-gas mixture flow.
