Abstract (en)  
[origin: WO2015150255A1] The invention relates to a method for the computer-controlled display of speed information, which represents the movement speed of a real moving object relative to the surroundings of the object, using an image display device. The speed information is displayed by generating one or more visually perceptible moving graphical patterns using the image display device, wherein the movement speed of the real moving object is reproduced by the one or more graphical patterns in a qualitative manner. The invention further relates to a device for the computer-controlled display of speed information, to a flying object with such a device, and to a computer program for this purpose.
