Abstract (en)

[origin: CA2943942A1] The invention relates to an acquisition device (20) comprising a wall and a transducer (23) consisting of a body (24, 324) to which electrodes are attached at a distance from each other. An electrical impedance (R) of the transducer is variable according to the deformations of same. Looking along a direction perpendicular to a surface (36) of the wall, at least two electrodes (25) of said plurality of electrodes are separate from each other. The transducer is built into the wall, beneath the surface (36) thereof.
