Abstract (en)

[origin: WO2015149976A1] The invention relates to a distributed authentication system (100) comprising a first computer system (130) which provides a first authentication system (136) and a first service, a second computer system (138) which provides a second authentication system (144) and a second service (143), and a bridge computer system (118). In the event of an unsuccessful authentication attempt on the first computer system, the user is redirected to the second computer system. After the user has been authenticated on the second computer system, the user is treated by the first computer system as having been successfully authenticated. One embodiment describes a second computer system in the form of an ID provider computer system having an ID-token-based authentication system.
