Abstract (en)

Object: An object is to provide a metal plate provided with higher aesthetics and better design, a storage case in which the metal plate is used, and a method for processing a surface of the metal plate with which the metal plate can be provided with higher aesthetics and better design. Means to Solve the Problem: In a configuration of a metal plate (110) according to the present invention, on a surface (110a) of the metal plate (110), a plurality of first polishing columns (112) are formed in parallel to each other, with multiple circular arc-shaped polishing marks being successively formed in a direction in which the circular arcs curve, and a plurality of second polishing columns (114) are formed in parallel to each other, with multiple circular arc-shaped polishing marks being successively formed, as in the first polishing columns (112), the second polishing columns (114) intersecting with and superimposed on the first polishing columns (112).
