Abstract (en)

[origin: JP2017032564A] PROBLEM TO BE SOLVED: To stop bounces of a magnetic or electrostatic escapement device by adding a non-return device. SOLUTION: In a timepiece escapement mechanism 200, a stopper 2 forms a part of the escapement mechanism 200; an escape wheel 1 includes a succession of tracks carrying magnetic or electrostatic field potential ramps 6; the magnetic or electrostatic field potential ramps 6 are arranged to cooperate with a resonator 100 or individually with the stopper 2; the escapement mechanism 200 comprises a non-return device 5 arranged to oppose the recoil of the escape wheel 1; the stopper 2 cooperates, on the one hand, with a plate forming a part of the resonator mechanism and, on the other hand, with these magnetic or electrostatic field potential ramps 6 by at least one pole shoe 31, 32; the pole shoe 31, 32 forms a part of the stopper 2 and is arranged to move in the field corresponding to the magnetic or electrostatic field potential ramps 6. SELECTED DRAWING: Figure 7

Abstract (fr)

Mécanisme d'échappement (200) d'horlogerie comportant au moins un résonateur (100) et au moins une roue d'échappement (1) agencée pour coopérer avec un tel mécanisme résonateur (100), ou bien directement, ou bien indirectement au travers d'un arrêt (2) que comporte ce mécanisme d'échappement (200), cette roue d'échappement (1) comportant une succession de pistes (4) porteuses de rampes (6) de potentiel de champ magnétique ou électrostatique, ces rampes (6) étant agencées pour coopérer avec le résonateur (100) ou respectivement avec l'arrêt (2). Ce mécanisme d'échappement (200) comporte un dispositif anti-retour (5) agencé pour s'opposer au recul de la roue d'échappement (1).
