Abstract (en)

[origin: CN106449195A] The invention relates to a facility (100) for actuating an operating handle (910) of an electrical switch (900) with electric contacts (920, 921). The facility (100) comprises an arm piece (130) for operating the operating handle (910) of the electrical switch (900). The arm piece (130) and a mechanical bridging member (200) form action connection. The bridging member (200) can carry out linear movement along a fixed axis (500). The bridging member (200) is composed of a first part (210) and a second part (220) in a two-piece mode. Two parts (210, 220) can move along the fixed axis (500). The first part (210) of the bridging member (200) and the arm piece (130) form action connection. The second part (220) is held by a spring (600) on the first part (210). The second part (220) of the bridging member (200) is driven by a mechanical mechanism along the fixed axis (500).
