Abstract (en)

[origin: WO2015154193A1] An oxygenated cardioplegic composition for immediate reperfusion of a donor heart after its procurement. The composition comprises an adenosine- lidocaine mixture for causing immediate cessation of the heart's systolic function upon contact; a normokalemic concentration of potassium ions; a concentration of Ca<sup>2+</sup> ions selected to maintain the intracellular level of Ca<sup>2+</sup> ions in the harvested heart muscle cells at about 10.4 mmol/L; and a pH of 6.9. The oxygenated cardioplegic composition is pre-warmed to about 35° C and then used for immediate reperfusion of a donor heart for at least three minutes after its procurement.
