Abstract (en)

[origin: WO2015155039A1] The invention relates to a method for coating a metal strip (2) moving in the strip running direction (5), in which method the metal strip (2) is guided past an application device (3) for applying a coating medium, in such a way that the coating medium is applied to a metal strip surface of the metal strip (2) by means of an application roller element (10, 11) of the application device (3), wherein, during the application of the coating medium, the metal strip (2) is moved relative to the application roller element (10, 11) transversely with respect to the strip running direction (5), in order to avoid coating faults on the metal strip surface to be coated.
