Abstract (en)
[origin: WO2015155375A2] This relates to a system for converting an automobile from endothermal engine powered drive to electric motor powered drive. Such a system is characterised in that the replacement of the endothermal engine (M), mounted in series on the automobile, with an electric motor (1), takes place by means of an operation that does not require any modification and/or replacement of the mechanical parts present in the bearing structure and of the components that were moved by the above-mentioned endothermal engine and that, after the intervention, are moved by the above-mentioned electric motor.
