Abstract (en)
[origin: WO2015155073A1] The present invention relates to an elevator system (100) having at least two cabs (110, 120) that can move in an elevator shaft (101), and having at least two drives (113, 123), each of the drives (113, 123) being designed to drive one of the cabs (110, 120) for moving it within the elevator shaft (101), wherein the at least two cabs (110, 120) are arranged within a frame device (200) that can move in the elevator shaft, and the at least two cabs (110, 120) can move relative to each other within the frame device (200) by means of each of their respective drives (113, 123).
