Abstract (en)

[origin: WO2015155425A1] The present invention relates to a fitting device (1) to be rigidly connected to the head (8) of a rod (6) acting as a holding element for a construction element. The device (1) comprises a base (5) having a length and a width and intended for being engaged against a holding structure. Said base (5) includes at least one oblong hole (4, 4a) through which a means for attaching the device (1) to the holding structure is intended to pass. The base (5) also has two flanges (2). Each flange (2) is placed on the median portion of a respective longitudinal side of the base (5). Each flange (2) has a means for rigid connection (2a) via clipping, intended for engaging with the complimentary means (7) provided on the head (8) of the rod (6).
