Abstract (en)
[origin: WO2015154114A2] The invention relates to a watch, especially a wrist watch, comprising a housing (1); a watch dial (3) arranged in the housing (1); at least one endless belt (8) for at least one hand (5), said endless belt being guided around two deflection guides (7) having deflection axes that are parallel to the watch dial (3); and a drive for the endless belt (8). To create advantageous structural conditions, the invention proposes that the watch dial (3), which extends between the two sides of the endless belt (8), be mounted on a mounting (11) which is either provided laterally to the outside of the rotation path of the hand (5) or fastened laterally to the outside of the rotation path of the hand (5).
