Abstract (en)

[origin: WO2015155479A1] The invention concerns a system for collecting and managing vital data (DA) of patients (Pi, Pj ) delivered by measuring devices (Ax, Ay, Az) in a healthcare establishment. Such a system comprises a platform (10) that collects and manages said data. The platform (10) cooperates with a server (1) of computerised patient files (DPI) and with a plurality of communicating devices (20, 20a, 20b) used by the healthcare staff. The platform comprises repositories of patients (MI) and measuring devices (MA) in order to control associations or dissociations of devices and patients. The platform (10) generates and transmits requests to the server (1) for relevant and complete updates of computerised patient files (DPI). The invention further concerns an administration device (6) that interacts with the platform (10) in order to supervise said measuring devices. Figure 3.
