Abstract (en)  
[origin: WO2015155470A2] The invention relates to a haptic controller (1), including: a base (2); a control member (3), and a control mounting (33) suitable for enabling the application of a variable force at one or more points; a connection member (4) connecting the control member (3) to the base (2), characterised in that two pivots (72, 71) having parallel axes connect the connection member (4) to the base (2) and to the control member (3), the haptic controller (1) further including damping elements (81, 82) arranged between the base (2) and the connection member (4) and between the connection member (4) and the control member (3), respectively, so as to damp the pivoting of the connection member (4) and of the control member (3) during the application of force onto the control mounting (33).
