Abstract (en)

[origin: EP3131111A1] An electronic switch device with ceramic materials comprises a housing, a detenting assembly, and an isolating composite material. The housing has a first half portion and a second half portion. A receiving chamber is defined by the first half portion and the second half portion. The detenting assembly is received in the receiving chamber and arranged in the second half portion. The isolating composite material is arranged at one side surface of the second half portion corresponding to the receiving chamber. The isolating composite material is isolated the contact between the second half portion and the detenting assembly.
