Abstract (en)
[origin: WO2015159008A1] Fluid-product dispenser comprising a reservoir of fluid product (R) in which the fluid product is stored under pressure, and a fluid-product outlet valve which is actuatable from a closed position to an open position so as to define a dispensing orifice (62), the outlet valve comprising a movable member (51) which rests in a sealing manner on a seat (63) in the closed position and which is not in contact with this seat (63) in the open position, the movable member (51) being movable axially and being urged elastically against the seat (63), the dispenser also comprising an actuator member (61) for moving the movable member (51) between the closed and open positions, characterized in that the dispensing orifice (62) and the actuator member (61) are both formed by a rotary disc (6).
