Abstract (en)
[origin: WO2015158766A1] The invention relates to an accelerating or braking device (10) for furniture (1) or household appliances, comprising a catch (14) that can be moved along a guide track (12) and has a receiving means (16) into which a section (23, 40) of an activator (21, 21') can be inserted, in order to move the catch (14) along the guide track (12) against the force of a damper (18, 19), wherein the activator (21, 21') is applied to a contact surface (24) of the catch (14) when impinging on the catch (14), wherein the contact surface (24) is oriented, in an inclined manner, in a direction perpendicular to the direction of movement of the catch (14), and the section (23, 40) of the activator (21, 21') is swivelled into the receiving means (16) when impinging on the contact surface (24). In this way, a skipping of the activator on the catch (14) is reliably avoided.
