Abstract (en)

[origin: WO2016016280A1] The invention relates to a heat shield element (1) and a heat shield arrangement (11) for lining a combustion chamber wall, wherein the heat shield element (1) has a hot side (2) which can be contacted by a hot medium and a cold side (3) lying opposite the hot side (2) and a circumferential edge (4) adjoining the hot side (2) and the cold side (3). The edge (4) extends past the plane of the cold side (3) and has, at least in sections, a plurality of cool air openings (8a, 8c), wherein the cool air openings (8a) of an edge section (7a) of a heat shield element (1) are arranged offset to the cool air openings (8c) in the edge section (7c) of the adjacent heat shield element (1). The invention further relates to a method for producing a heat shield element (1).
