Abstract (en)

[origin: WO2015158599A1] The invention relates to a device (100) for detecting a parameter of a gas. The device (100) comprises at least one cavity (104) for receiving the gas from an outer area (108) and at least one membrane (106) for separating the cavity (104) from the outer area (108), wherein a first membrane (106) side (110) facing the outer area (108) has a first layer (114) of an electrically conductive material, and a second membrane (106) side (112) which faces the cavity (104) and lies opposite the first side (110) has a second layer (116) of an electrically conductive material. At least one portion of the membrane (106) has an ion-conductive material. The invention also relates to at least one pressure measuring element (118) which is arranged on the membrane (106) for detecting a gas pressure in the cavity (104).
