Abstract (en)
[origin: WO2015158500A1] Described is an antenna arrangement comprising a printed circuit board having a front face and a rear face as well as an antenna structure on the front face and/or the rear face. The antenna arrangement further comprises at least one metal-plated contact area that is located on a face of the circuit board, is electrically connected to the antenna structure, and is to be surface-mounted on a surface of a printed circuit board. A design of said type allows the antenna arrangement to be mounted on a printed circuit board using surface mount technology (SMT).
