Abstract (en)

[origin: WO2015158434A1] The invention relates to a method for operating a security module (300) of a mobile terminal (200) and to a security module (300). The security module (300) is designed to communicate via a mobile communication network of a plurality of mobile communication networks (110, 120), said security module (300) having different system configurations (331, 332, 333) for different mobile communication networks (110, 120) of the plurality of mobile communication networks (110, 120). The security module (300) receives subscription data for registering into a mobile communication network (110, 120) of the plurality of mobile communication networks (110, 120), analyzes the subscription data (321, 322), and identifies the mobile communication network (110, 120) of the plurality of mobile communication networks (110, 120). The security module (300) then selects a system configuration (331, 332, 333) according to the mobile communication network (110, 120) identified in the previous step. The security module (300) is operated in the identified mobile communication network (110, 120) using the selected system configuration (331, 332, 333).
