Abstract (en)
[origin: US2017049232A1] A device for moving a movable furniture part, the device including a basic component on which a force accumulator is present such that the movable furniture part under the action of the force accumulator is capable of being put in the opening direction of the movable furniture part. A separate cover component, configured so as to match the basic component, of the device is present, which cover component covers the basic component, wherein connection means on the cover component are configured in such a manner that integration of the device on a counter portion on the item of furniture and/or the guide means is arrangeable using the connection means which are present on the cover component.
